## Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>Statistics Canada</b><br><i>Data Engineer Co-op</i> <ul style="list-style-type: none"><li>• Implemented client-requested updates for internal applications, including bilingual support and configurable prompts for a code-learning chatbot.</li><li>• Fixed broken <b>CI/CD pipelines</b> and tested <b>Copilot Studio agents</b> with internal data, helping restore application delivery and evaluate knowledge retrieval for organization-specific use cases.</li></ul>                                                                                                                                                                    | April 2026 - Present<br>Ottawa, ON      |
| <b>CIBC</b><br><i>Software Developer Co-op</i> <ul style="list-style-type: none"><li>• Built <b>Databricks ETL workflows</b> to move compliance data into <b>Power BI</b>, creating automated security reports and dashboards that cut audit preparation time by <b>50%</b>.</li><li>• Used <b>Python Pandas</b> and <b>SQL</b> to clean large datasets, fix inconsistent records, and improve the accuracy of compliance reporting.</li><li>• Automated system health checks and patching script deployments using <b>Ansible</b>, <b>Oracle Autonomous Health Framework</b>, and <b>GitHub Actions</b>, reducing manual checks by 60%.</li></ul> | May 2025 - December 2025<br>Toronto, ON |
| <b>CIBC</b><br><i>Software Developer Intern</i> <ul style="list-style-type: none"><li>• Performed database updates and maintenance, including schema changes and version upgrades, backup and restore, contributing to a <b>10% reduction in data-related incidents</b>.</li><li>• <b>Implemented PostgreSQL AI extensions</b> for 10+ databases, leading to a 30% reduction in query execution time and enhanced database efficiency.</li></ul>                                                                                                                                                                                                   | May 2024 - August 2024<br>Toronto, ON   |

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>MediBot</b>   <i>Python, FastAPI, Databricks, SQL, Delta Lake, MLflow, scikit-learn, TF IDF, kNN, REST APIs, LLaMA, Git</i> <ul style="list-style-type: none"><li>• Built an end to end medical chatbot using Python and a custom <b>Retrieval Augmented Generation pipeline</b> with <b>TF IDF</b> and <b>kNN</b> cosine similarity for real time medical information retrieval.</li><li>• Designed and implemented scalable <b>data ingestion</b> and preprocessing pipelines on Databricks, storing curated medical data from MedlinePlus and openFDA in Delta tables.</li><li>• Trained and deployed lightweight <b>NLP models</b> for question classification and document retrieval using Databricks compute and MLflow.</li><li>• Integrated a LLaMA based language model with retrieved medical context generate safe and consistent responses.</li></ul> |
| <b>Job Trend Analysis</b>   <i>Python, Pandas, SQL, AWS S3, AWS RDS, AWS Lambda, AWS Secrets Manager, AWS EC2, Streamlit, Docker</i> <ul style="list-style-type: none"><li>• Built a Python data pipeline to collect job postings from external APIs, store raw data in <b>AWS S3</b>, and <b>automate ingestion</b> with AWS Lambda.</li><li>• Cleaned and transformed job posting data with <b>Pandas</b> before loading it into <b>AWS RDS</b> using structured SQL schemas.</li><li>• Created a Streamlit app for exploring job trends by skills, roles, and locations, with credentials managed through <b>AWS Secrets Manager</b>.</li></ul>                                                                                                                                                                                                                   |

## Skills

|                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Cloud Platforms:</b> AWS, Microsoft Azure, Oracle                                                                                |
| <b>Frameworks/Tools:</b> React, Express, Git, Docker, Databricks, Ansible, Node.js, Github Actions, RESTful Web API, FastAPI, Quart |
| <b>Databases:</b> MySQL, PostgreSQL, AWS DynamoDB, MongoDB, SQLite, CosmosDB                                                        |
| <b>Languages:</b> Python, SQL, C/C++, Java, JavaScript, TypeScript, HTML/CSS, Haskell, Prolog                                       |
| <b>Interpersonal Skills:</b> Team Collaboration, Communication, Problem Solver, Time Management, Inquisitive                        |
