Education

Carleton University <i>Bachelor of Computer Science, Artificial Intelligence and Machine Learning</i> • Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming, Systems Programming • GPA: 3.7/4.0	Expected 2027 Ottawa, ON
--	-----------------------------

Experience

Statistics Canada <i>Data Engineer Co-op</i> • Implemented client-requested updates for internal applications, including bilingual support and configurable prompts for a code-learning chatbot. • Fixed broken CI/CD pipelines and tested Copilot Studio agents with internal data, helping restore application delivery and evaluate knowledge retrieval for organization-specific use cases.	April 2026 - Present Ottawa, ON
CIBC <i>Software Developer Co-op</i> • Built Databricks ETL workflows to move compliance data into Power BI, creating automated security reports and dashboards that cut audit preparation time by 50%. • Used Python Pandas and SQL to clean large datasets, fix inconsistent records, and improve the accuracy of compliance reporting. • Automated system health checks and patching script deployments using Ansible, Oracle Autonomous Health Framework, and GitHub Actions, reducing manual checks by 60%.	May 2025 - December 2025 Toronto, ON
CIBC <i>Software Developer Intern</i> • Performed database updates and maintenance, including schema changes and version upgrades, backup and restore, contributing to a 10% reduction in data-related incidents. • Implemented PostgreSQL AI extensions for 10+ databases, leading to a 30% reduction in query execution time and enhanced database efficiency.	May 2024 - August 2024 Toronto, ON

Projects

MediBot <i>Python, FastAPI, Databricks, SQL, Delta Lake, MLflow, scikit-learn, TF IDF, kNN, REST APIs, LLaMA, Git</i> • Built an end to end medical chatbot using Python and a custom Retrieval Augmented Generation pipeline with TF IDF and kNN cosine similarity for real time medical information retrieval. • Designed and implemented scalable data ingestion and preprocessing pipelines on Databricks, storing curated medical data from MedlinePlus and openFDA in Delta tables. • Trained and deployed lightweight NLP models for question classification and document retrieval using Databricks compute and MLflow. • Integrated a LLaMA based language model with retrieved medical context generate safe and consistent responses.
Job Trend Analysis <i>Python, Pandas, SQL, AWS S3, AWS RDS, AWS Lambda, AWS Secrets Manager, AWS EC2, Streamlit, Docker</i> • Built a Python data pipeline to collect job postings from external APIs, store raw data in AWS S3, and automate ingestion with AWS Lambda. • Cleaned and transformed job posting data with Pandas before loading it into AWS RDS using structured SQL schemas. • Created a Streamlit app for exploring job trends by skills, roles, and locations, with credentials managed through AWS Secrets Manager.

Skills

Cloud Platforms: AWS, Microsoft Azure, Oracle
Frameworks/Tools: React, Express, Git, Docker, Databricks, Ansible, Node.js, Github Actions, RESTful Web API, FastAPI, Quart
Databases: MySQL, PostgreSQL, AWS DynamoDB, MongoDB, SQLite, CosmosDB
Languages: Python, SQL, C/C++, Java, JavaScript, TypeScript, HTML/CSS
Interpersonal Skills: Team Collaboration, Communication, Problem Solver, Time Management, Inquisitive
